HIT and HIE in Alaska

Health Information Technology

Systems working together: to reduce health care costs & improve the quality of care

Key Terms

• Health Information Technology (HIT)

- Any computer systems and electronic technologies used for health and health care purposes.

Common forms of HIT are:

• Electronic Medical Record (EMR)

- A person's provider specific medical chart in electronic format

• Electronic Health Record (EHR)

- Captures patient information electronically as related to health care, payment, and wellness; may contain some but not all of the information in an EMR as well as information not found in an EMR

• Health Information Exchange (HIE)

- An electronic means to share computerized health information, it can take many forms; a portal, network, cloud computing, etc.

Health Information Technology

Systems working together: to reduce health care costs & improve the quality of care

Statewide HIT Program Goals:

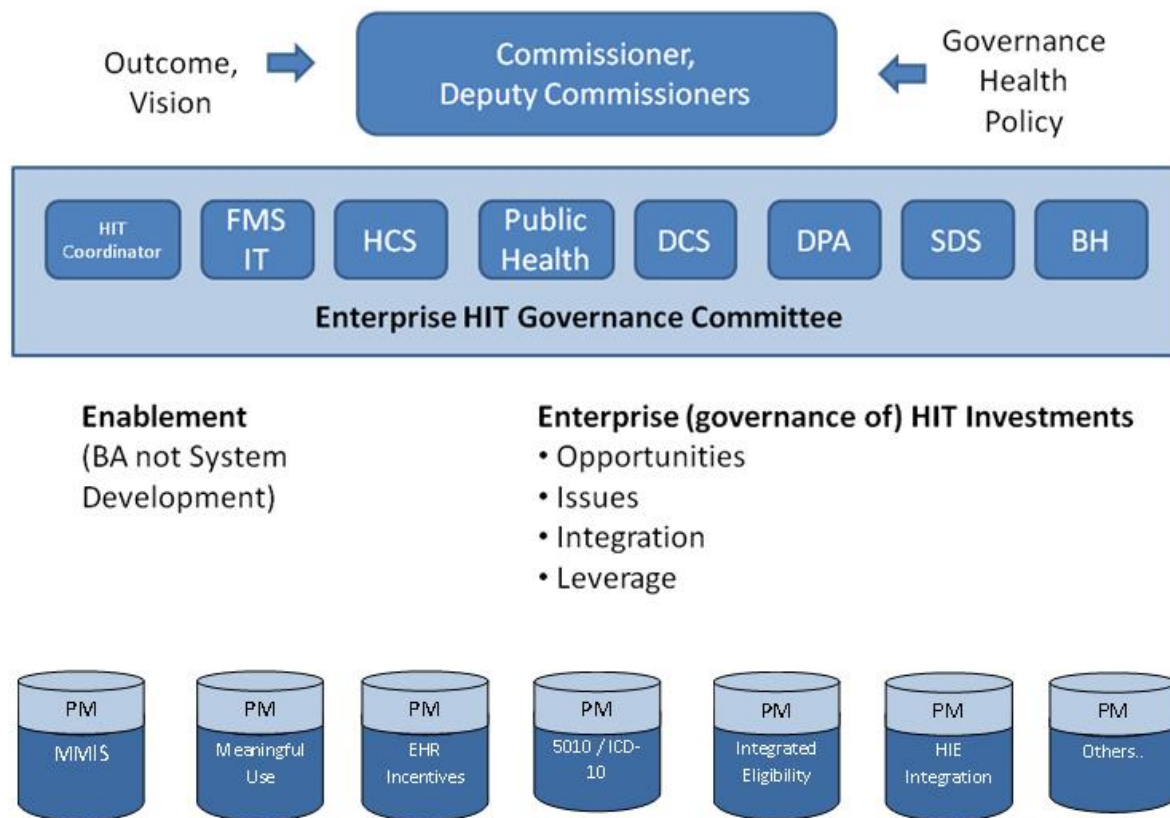

- Improve access to healthcare services and affordable health insurance coverage.
- Reduce Alaska's medical inflation rate so that it is at least below the national rate, in order to contain cost growth.
- Assure that healthcare services delivered in Alaska meet the highest quality and safety standards
- Focus on prevention, not just clinical preventive services for individuals, but public health. community-based policies and programs, to support improved health status and to control costs by reducing the burden of preventable illness and injury.

Health Information Exchange

Health Information Technology

Systems working together: to reduce health care costs & improve the quality of care

HIE Needs

- Master Client Index (MCI)
 - List of all individuals in the state
- Mater Provider Index (MPI)
 - Entity Level
 - List of all provider groups
 - Individual Level
 - List of all providers
 - Relationships between providers and groups
 - Message destination for each provider at each entity

Health Information Technology

Systems working together: to reduce health care costs & improve the quality of care

EHR Incentives

Provider Type	Potentially Eligible (estimate)	Registered with CMS	Registered with State	Attestation Completed
Professionals & Groups	2500	49	36	22
Hospitals	21	5	0	0
Total	2521	54	36	22

Health Information Technology

Systems working together: to reduce health care costs & improve the quality of care

Stage 1 Meaningful Use requirements related to HIE:

- E-prescribing
- Receipt of structured lab results
- Sharing patient care summaries across unaffiliated organizations

Health Information Technology

Systems working together: to reduce health care costs & improve the quality of care

Eligible Hospitals Clinical Quality Measure Survey Results

Clinical Lab Test Results

- % in Use
- % Not in use
- % Not Functionally available
- % No response or not sure

Summary of Care

- % in Use
- % Not in use
- % Not Functionally available
- % No response or not sure

Electronic Prescribing

- % in Use
- % Not in use
- % Not Functionally available
- % No response or not sure

Health Information Technology

Systems working together: to reduce health care costs & improve the quality of care

Eligible Professionals Clinical Quality Measure Survey Results

Clinical Lab Test Results

- % In Use
- % Not In Use
- % Not Functionally available
- % No response or not sure

Summary of Care

- % In Use
- % Not In Use
- % Not Functionally available
- % No response or not sure

Electronic Prescribing

- % In Use
- % Not In Use
- % Not Functionally available
- % No response or not sure

Health Information Technology

Systems working together: to reduce health care costs & improve the quality of care

Meaningful Use

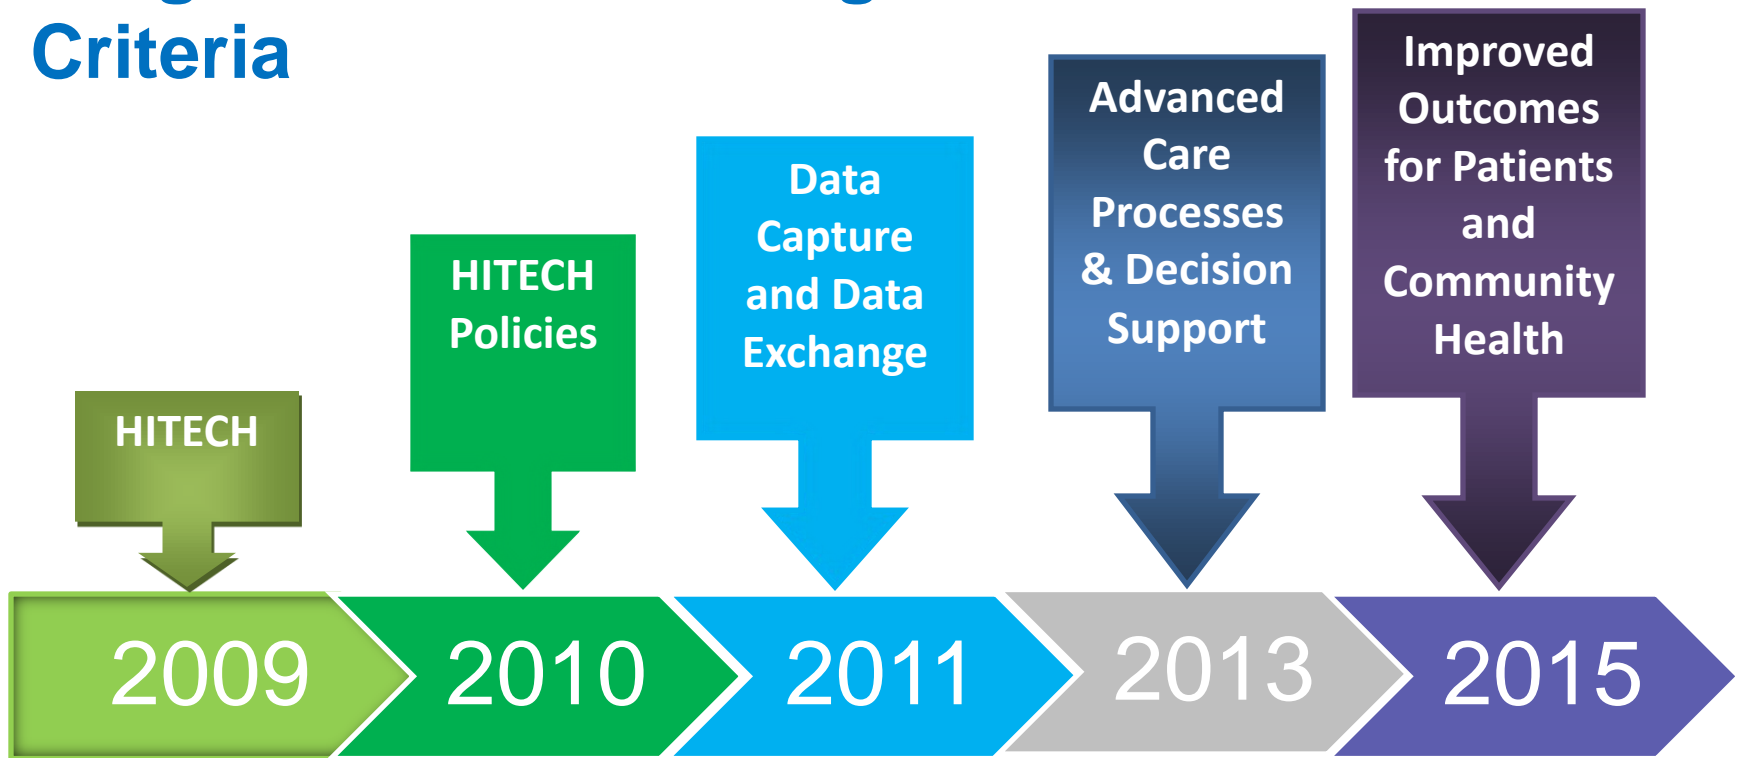

- Set of measures
 - Quality (outcomes)
 - Process (use of best practices/data capture)
 - Capabilities (computerized functions)
- Slightly different measures for hospitals and health professionals
- Providers must attest to and later submit these measures to receive funds

Health Information Technology

Systems working together: to reduce health care costs & improve the quality of care

Progression of Meaningful Use Criteria

Stage 1 Objectives and Measures Reporting

- Eligible Professionals must complete:
 - 15 core objectives
 - 5 objectives out of 10 from menu set
 - 6 total Clinical Quality Measures
(3 core or alternate core, and 3 out of 38 from alternate set)
- Hospitals must complete:
 - 14 core objectives
 - 5 objectives out of 10 from menu set
 - 15 Clinical Quality Measures

Health Information Technology

Systems working together: to reduce health care costs & improve the quality of care

What will the EHR/clinical data be used for

- Promote care coordination with providers?
- Link participants with departments for network of care?
- Use of Evidence based Medicine and Physician Practice guidelines?
- Support population based research and outcomes measurements?
- Improve patient education and follow-up care interventions?
- Any new clinical/quality items that we will want to collect?

Health Information Technology

Systems working together: to reduce health care costs & improve the quality of care

Barriers

- Providers
 - Not all providers are eligible for EHR Incentives
 - Not all eligible providers can make the business case to adopt certified EHR's
 - Providers find it difficult to make the business case for ePrescribing
 - Meaningful Use requirements
- State
 - Siloed data in state systems and lack of trust between divisions and departments
